

ISO 9001 certified and a Recognised Service Facility (MLA073367), NPG Mining / CMS Asia Pacific delivers trusted, compliance-led workshop support for surface and underground mining equipment requiring flameproof electrical systems. We provide end-to-end servicing, repairs and overhauls that keep critical assets safe, available and audit-ready—backed by practical repair expertise, engineered compliance and lifecycle capability.

Our team supports underground fleets across roadheaders, continuous miners, feeder breakers, shuttle cars, bolters, excavators, DCBs, substations and QDS equipment, plus auxiliary infrastructure such as fans and pumps, including Service Exchange for diesel electrical components (alternators).

CMS also lead with specialist compliance services including flameproof enclosure engineering design and approval, flameproof documentation audits for mobile and fixed plant, and diesel code inspections including C1 inspections for both surface and underground operations.

Audits / Inspections & Workshop Services

- Engineering design & approval
- Equipment repairs
- Service Exchange
